# BigKeys *Plus*

a simple alternative keyboard  
with 42 1-inch-square keys

## Features of BigKeys Plus

- **Punctuation Keys** Punctuation characters are accessed by holding down the Shift/Space bar and pressing the desired punctuation mark indicated in red on the upper row of keys and on the arrow keys. These punctuation characters, essential for word processing, spreadsheet and Internet access, are included:  
**! @ , . ' " : \* ? / + - =**
- **Shift Key** Use the Shift/Space bar for access to upper/lowercase alphabet and punctuation keys.
- **Backspace Key** A true "rub-out" key that deletes to the left of the cursor. The left arrow key pressed simultaneously with the Shift/Space bar yields Rub Out.
- **F1 - F10 Keys** Press and hold the "F" key and the numeric keys become F1 - F10. For example, pressing the F and 1 keys simultaneously yields F1.
- **"Run On" eliminated** A single key depression causes one character to be sent to the computer, no matter how long it is held down.
- **Caps Lock feature** As an alternative to holding down the Shift-Space bar, the Caps Lock key will lock all shift options as well as uppercase.
- **Switchable QWERTY or ABC key layout** Order either key layout. Built-in logic allows switching to meet future needs.
- **Key color options** BigKeys Plus is available with Bright **White** keys (black lettering) or **Multi-Color** keys (black lettering).
- **No special software required** Just plug BigKeys Plus into your computer in place of the standard keyboard

## BigKeys Plus Specifications:
